

MSAS Tutorial Sequence -Module One-

WRITTEN BY ADVAY MUCHOOR

A solid yellow horizontal bar spanning the width of the slide at the bottom.

**WELCOME
TO
MSAS**

What is MSAS?

- Designed to introduce you to the world of sports analytics
- Give you the opportunity to learn and apply essential skills
- Network with other students that have similar interests as you
- Work with experienced leaders and faculty members
- Get hands-on experience with real data
- Talk sports!

What is the point of these tutorials?

1. Get you set up with a familiar environment
2. Provide you with a foundation that you may not learn in the classroom
3. Teach you what you need to know in order to get started on a research project

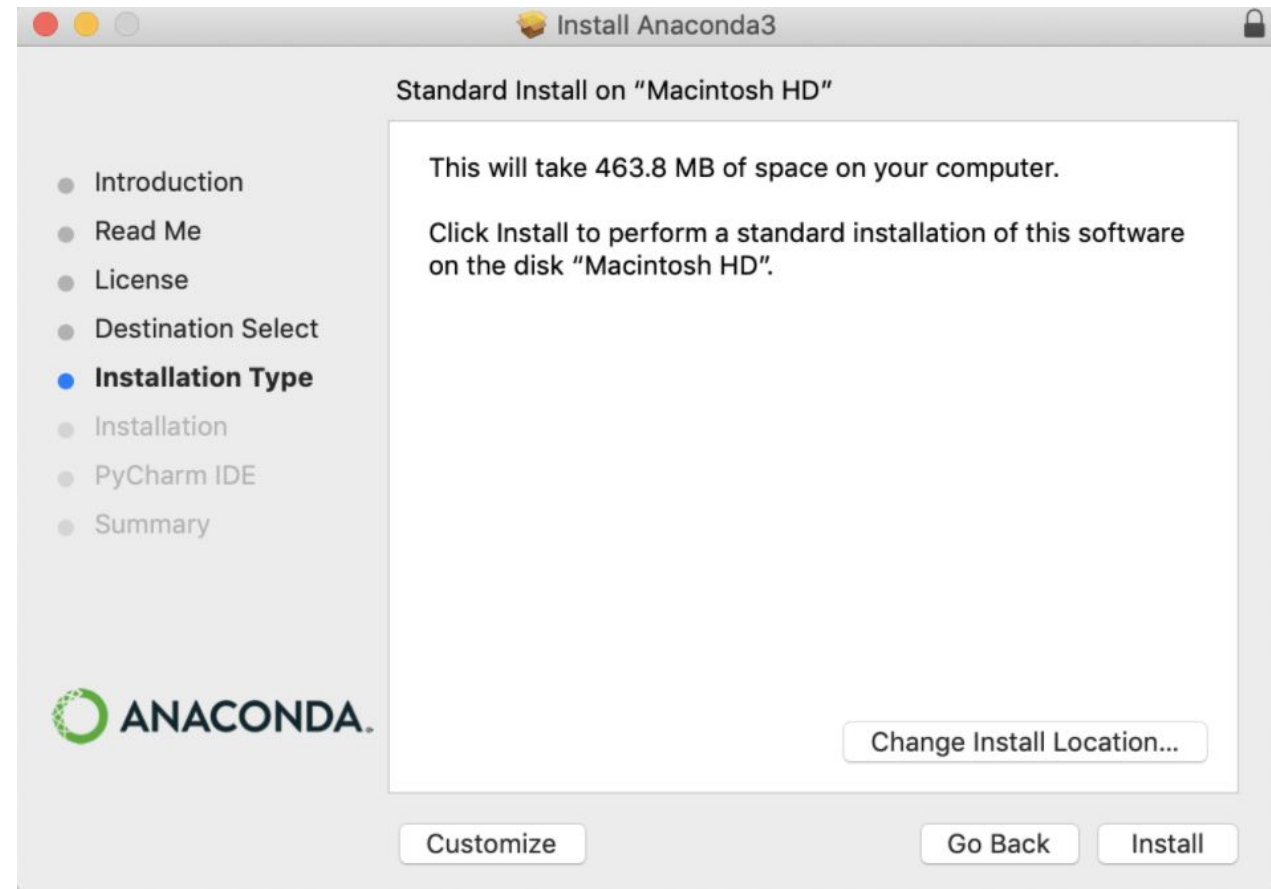

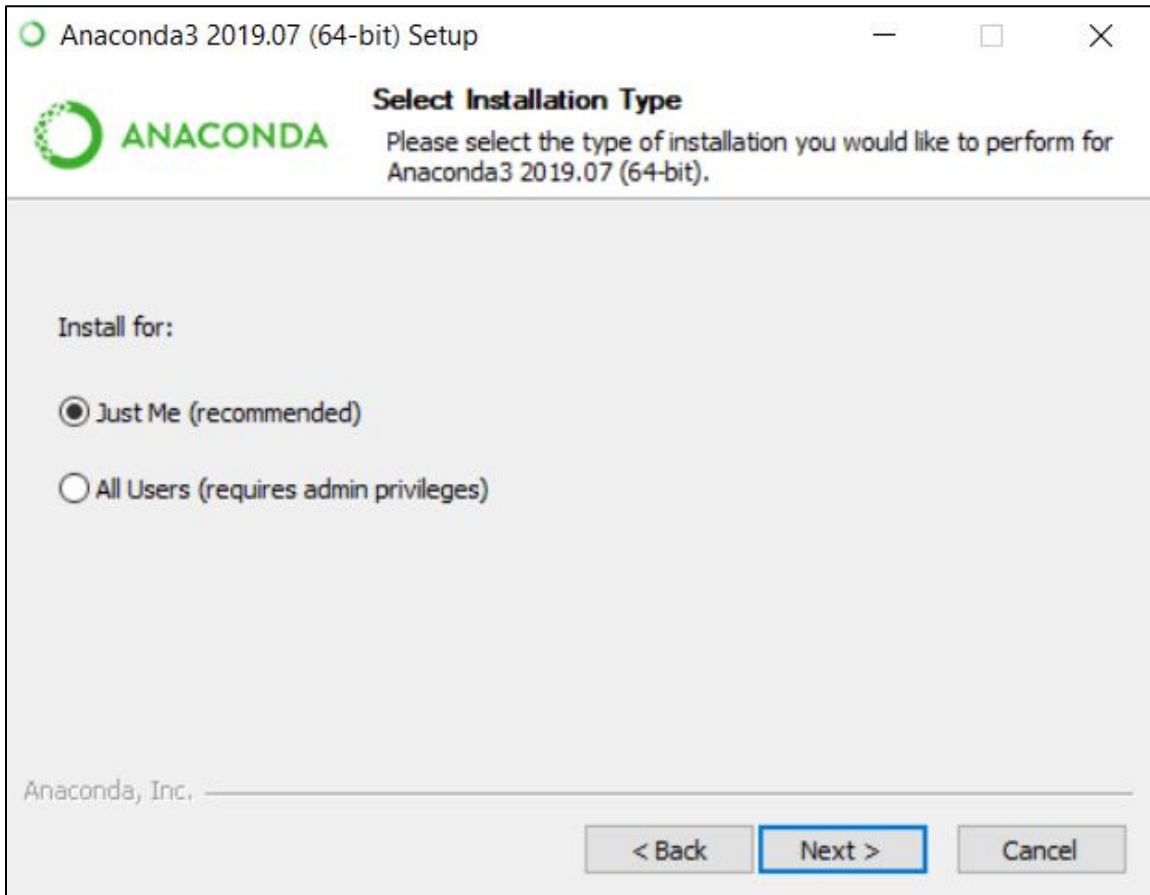

Who am I?

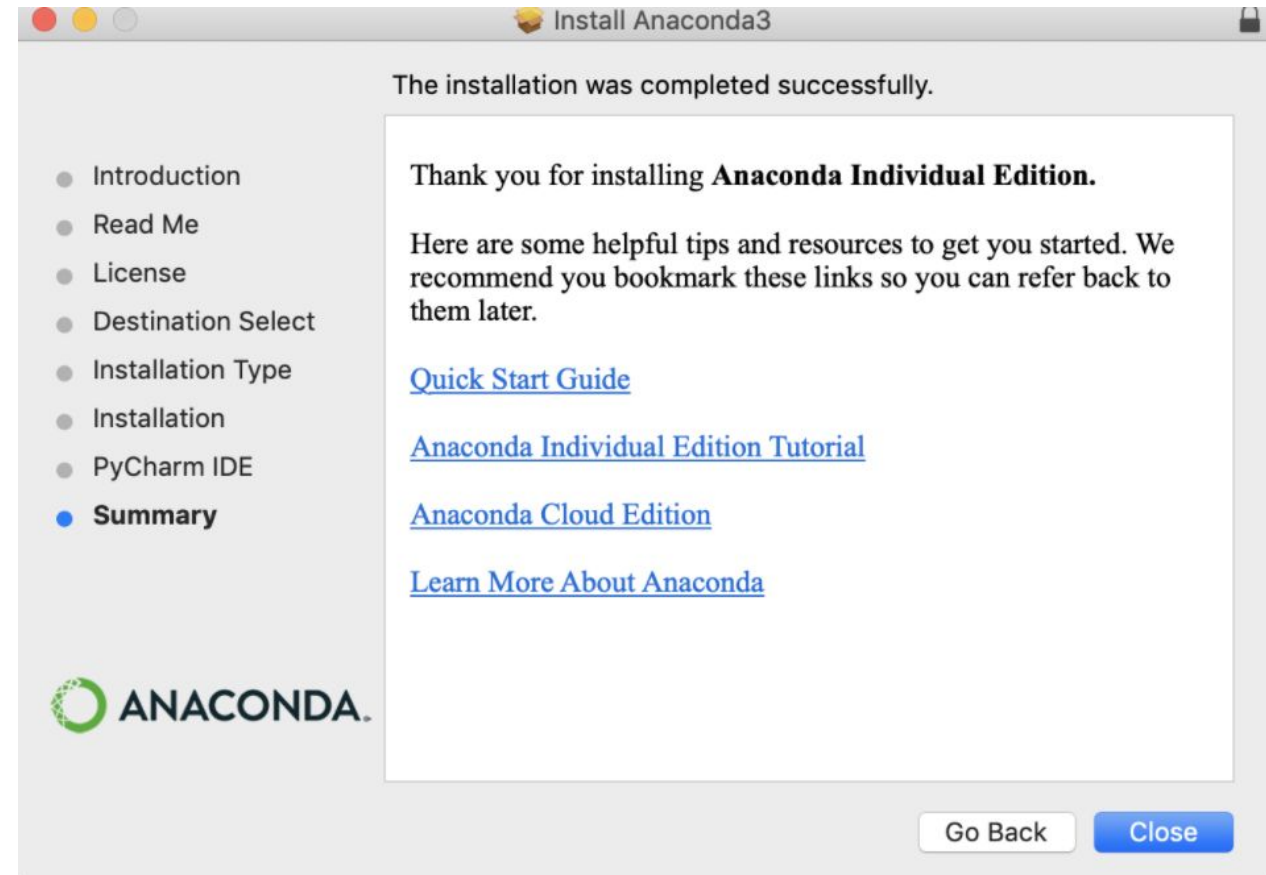

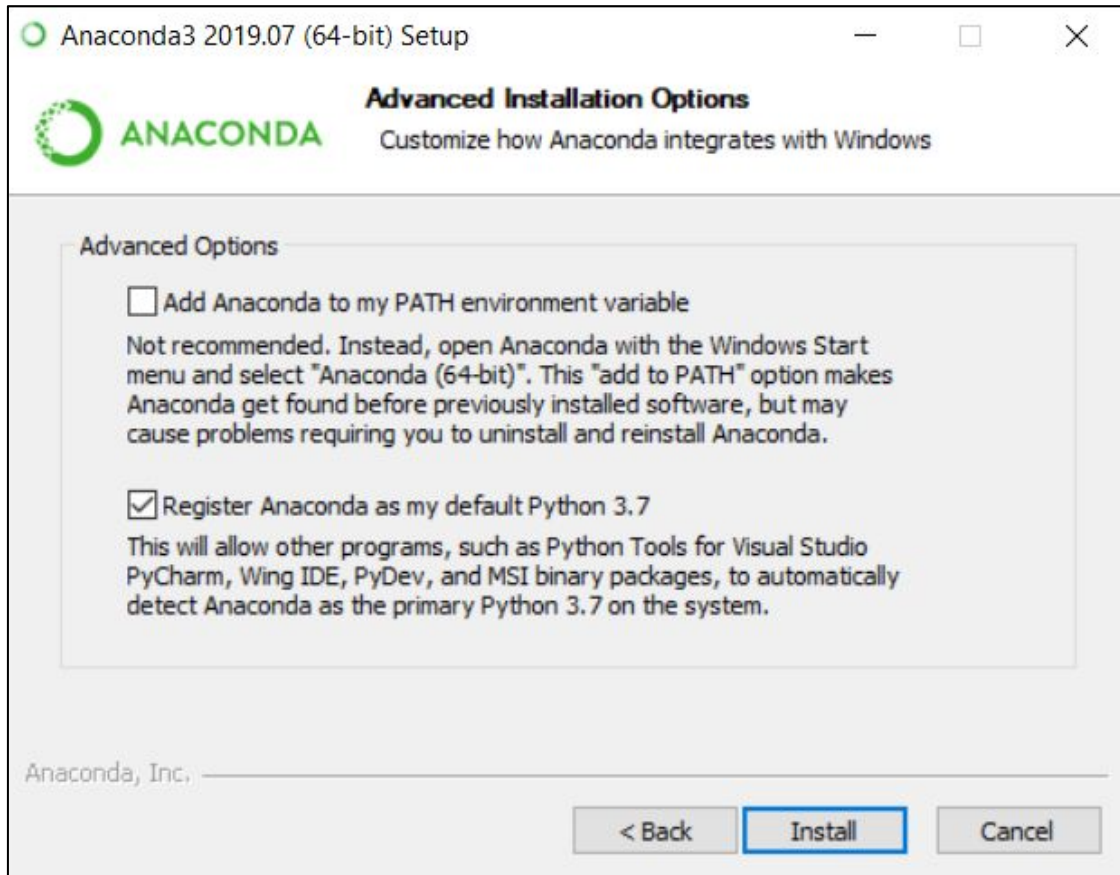

Goals of Today

1. Install Anaconda (Mandatory)
2. General Questions
3. Set up GitHub Account (Optional)
4. Set Up Your Command Line

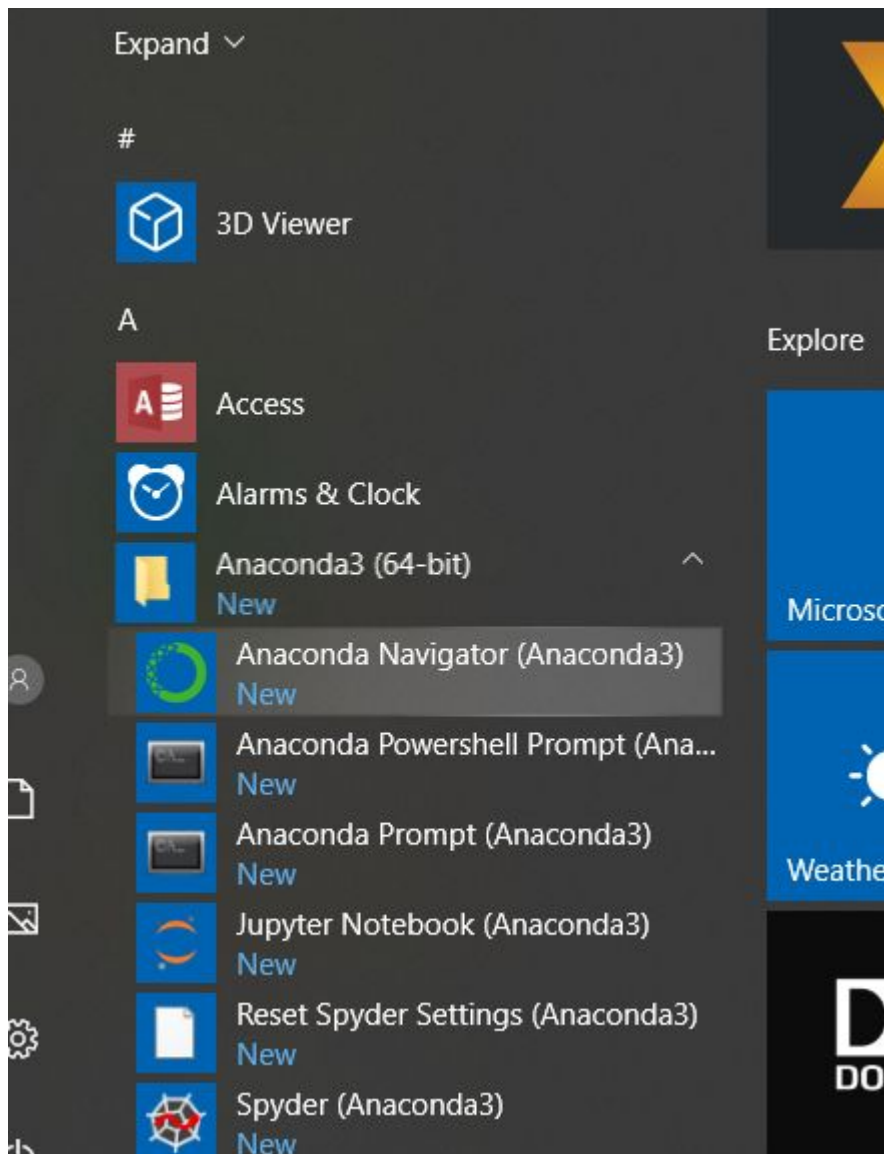

Installing Anaconda

- <https://www.anaconda.com/distribution/#download-section>
- Select your OS
- Select the 64-bit graphical installer for Python 3.7
 - If you already have the 2.7 version installed, you can keep it installed, but be wary that this tutorial sequence is designed for the 3.7 version
- The rest of the guide will contain screenshots from the MacOS and Windows Installation Guides. If you have any issues, please let me or one of the other leadership members know

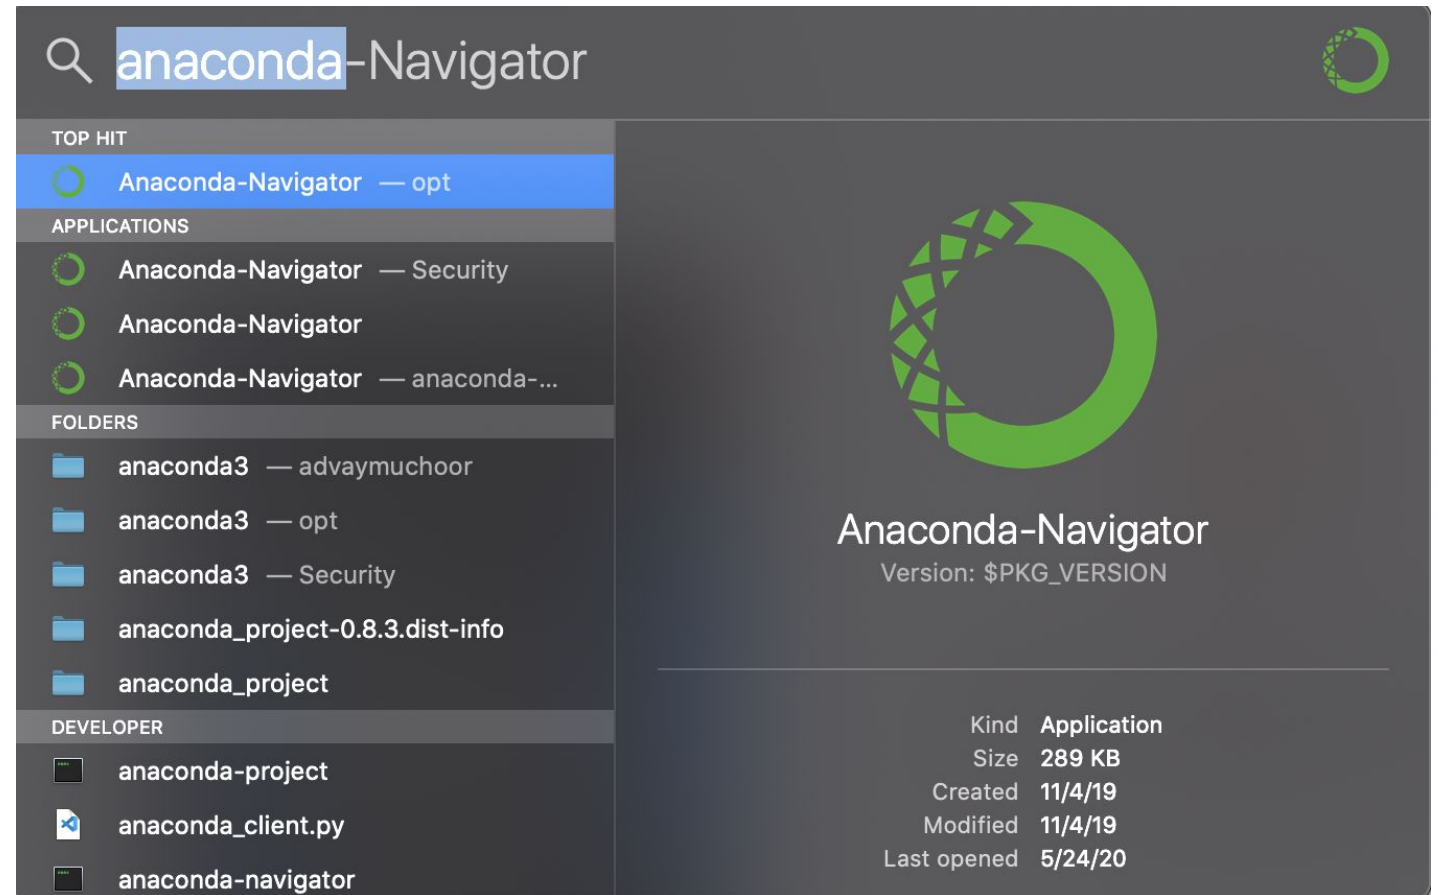

Questions about the club?

Why You Should Set Up a GitHub Account

- GitHub is a free code-sharing platform that allows for multiple collaborators and version control using Git
- GitHub is a great way to showcase work that you've already done and will do in the future
- Everyone who codes should know how Git works – you'll probably use it (or something similar) some day
- Great skill to have on your resume
- It's fast and easy to set up
- They have a cool logo (Octocat)

Setting Up Your Account

- Sign up at <https://github.com/>
- I would advise against using your school email
 - You can change the account email at any time
- Select the “Free” tier membership

Setting Up Your Command Line (Mac)

1. Install Brew (skip to step 4 if this is already done)

```
/usr/bin/ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"
```

2. Hit Return (or escape to cancel)

3. Enter your system password

4. Install git

```
brew install git
```

```
git config --global user.name "First Last"
```

```
git config --global user.email "your email"
```

Setting Up Your Command Line (Windows)

EECS 183 has you covered! Follow the guidelines you see on this walkthrough:

https://eecs183.org/docs/git_on_windows/

Configure your environment:

```
git config --global user.name "First Last"
```

```
git config --global user.email "your email"
```

Congrats on Finishing Your First Module!
